

# Flush-fitting Skirting board

# Flush-fitting Skirting board

The utmost attention to detail and a minimal design: these are the distinguishing features of the new **Flush-fitting Skirting board**, a solution designed to complete and supplement our flush-fitting range. Compatible with both sliding and swing door systems, the flush-fitting skirting board is also perfectly fit for the insertion of LED strips.

The solution comprises the following elements:

- 1) **Kit A:** “neutral” aluminium profiles without any processing.
- 2) **Kit B or kit C:** aluminium profiles with specific processing at the tips. This processing ensures the perfect fit with the profile of the frame or counter frame with which they are combined.
- 3) **Linear joints, variable joints** (for open and closed corners) or **joints for steps.** These components are necessary to ensure the aluminium bars are joined.
- 4) **Skirting board** in MDF coated with pre-lacquered paper (optional).

## LED strips not provided.
